Not my favorite textbook

By Laura

This textbook, although filled with a lot of useful information, has questions and problems that are not explained in the body of the text. I have had to reference other textbooks and internet articles to complete problems from this book, as there are no examples or standards on how to complete certain problems. I wish there were more examples available. That said, it was a required textbook for a class and I had no choice but to purchase it. If I were a teacher, however, I would not select this text for my students.

Circuitous route to the point.

By Alan Bilbrey

The main points of the text are dispersed throughout a litany of fluff. The form of presentation of the material is not straight forward; I feel like every chapter requires me to dig through words in order to find the pertinent and applicable facts. I've read through chapter 16 and honestly believe the same amount of information could have been presented in 8 chapters. This is really frustrating when time is so priceless in grad school.

As a comparison, "Investments" by Sharpe (1998) was a perfectly written book on the topic. I use it now to fill in the gaps created by this miserable read.

I had no choice as this book was required for a class, but I would never recommend it as a voluntary purchase.

Difficult to use

By Jodie D.

This is one of the worst textbooks I've ever had to use. Material is poorly organized and chapters are not laid out in a coherent and organized manner. Major formulas are difficult to find.
